

Programming Updates

The "traffic light" on the Main Menu is a status notification for programming updates. The colour of the light will change depending on the update status.

Updates will be automatically detected and will need to be run on all terminals. User or manager intervention may be necessary in some cases in order for the update to be applied.

A.

- 1) Touch the status light to view information about the update.

B.

Statuses of the light are as follows:

- Green** = no update has been applied in the last 7 days
- Yellow** = an update has been applied in the last 7 days
- Orange** = an update is waiting to be applied
- Red** = an update is waiting for manager approval

- 2) Touch **View updates that require Manager Approval**.

C.

- 3) Enter manager code or swipe manager card.

- 4) Touch **OK**.

D.

The top half of the screen lists the changes of any pending updates waiting for manager approval.

3) After reading the release notes, touch **Apply**.

Note: Not all updates may require manager approval since they may be required for proper operation of the system.

E.

4) To view release notes from previous updates, touch **View Update History**.

F.

5) Touch the update to be viewed.

The release notes for the selected update will be displayed.

6) Touch **Close** when finished.
